5. The application has been amended as follows:

--Claim 20. (Currently amended) A hand-held device for detecting dirty bombs and lost radioactive isotopes comprising:

a housing having a wall made of a predominantly epoxy composite material binder capable of withstanding temperatures from -50 to +70 degrees Celsius and sufficiently thick to withstand vibrations and optically opaque;

the radiation detector of claim 2 disposed in said housing;

an A/D converter disposed in said housing and coupled to the radiation detector;

a processor disposed in said housing and interfaced to the A/D converter for filtering ambient noise from detected radioactivity and control alarm indicator states;

a light, buzzer, or vibrating mechanism disposed in said housing and interfaced to the processor for alerting the holder to detected radiation;

a switch disposed in said housing and interfaced to the processor for control and diagnostic purposes; and

a battery disposed in said housing to power all components inside the housing.--

This amendment is necessary in view of the oversight in identifying the parent claim (see remarks filed April 5, 2006, page 9).
